BONES® BEARINGS

Bones Swiss bearings have the best reputation in the skateboard industry, and have had this honor for the past 17 years because of their performance and quality. Everyone who rides Swiss knows how fast they are, and most also comment on how long they last, typically several times as long as low cost bearings. Skaters who use Bones Swiss do so because they want the very best equipment they can get and they know the difference between ordinary and exceptional. Check out our bearing team, it is a who's who of top skaters and we are proud to be associated with each one of them.

mini-LOGO™

© S.O.C. 2002

Powell Mini•Logo™ products respond to the needs of both the value shopper and the avid skater, because Mini•Logo combines the highest performance with top quality and low price. They are made from the highest quality materials in our "no compromise," Santa Barbara manufacturing plant, and come with our liberal warranty against manufacturing defects. The only place we skimp is on the graphics, and we pass the savings on to our customers. This makes our Mini•Logo branded products the best value on the market. The success of these products shows that many skaters know this for a fact.

By offering Mini•Logo products to your customers you send a number of messages to your customers about your shop. First, it shows that you are a Skate One Dealer and that you support a company that has been at the center of skateboarding for 25 years supplying the finest decks, wheels, bearings, videos, and skateboard teams in the industry. Second, it shows that you choose to offer your customers top quality, brand name products instead of "blanks" of unknown origin and quality. Third, it shows that you offer a selection of product for all your customers, not just your higher income skaters. Fourth, it shows you want your customers to be satisfied with their purchases so they will enjoy skating and come back to you when they need more equipment.

Mini•Logo Decks are manufactured from the same raw materials and in the same unique "AirLam" presses as our top of the line Brigade and Powell lines. The only difference is the graphics. We offer the most popular shapes and concaves at a fraction of the price, with a life-long warranty. Mini•Logo decks are truly "the best for less."

Mini•Logo Wheels are made by Bones from quality raw materials similar to what other manufacturers offer as their top of the line compound. Not only do we manufacture Mini•Logo wheels to higher quality standards because of our precision metering equipment and decades of experience, we also sell it for less. A number of our team skaters have told us they like the way this compound skates better than many more costly formulations. We have never had a complaint about our Mini•Logo wheels, and neither will you.

HARDCORE BUSHINGS

The First Double Action Truck Bushings

Bones Hardcore™ Bushings: Combine legendary Bones® urethanes with a "hat-shaped" rigid insert to create the first and only "double action" bushing. Many Pro and top Am skaters replace their ordinary bushings with HardCores because they provide a smoother, quicker responding, more controllable, stable ride on any truck you install them on. The positive response from hardcore skaters inspires us to continue improving our bushings to compliment skate styles and preferences. As a result, Hardcore Bushings are now higher rebound and slightly harder than before. These two improvements make them even quicker responding and smoother than before.

The three hardnesses are tuned so that most street skaters will choose medium for all around skating, and hard if they want maximum stability. Soft HardCores are intended for small skaters, longboarding, and those who normally ride very loose trucks.

When you install Hardcore Bushings you will discover a number of positive improvements in the performance of your trucks, just as if you just got a pair of "new improved trucks." This is what you will experience:

There is no break-in period, just put them in, adjust to your preferred tightness and skate. This makes it easy to upgrade to Hardcore Bushings.

Your trucks will return to center by themselves when you release the pressure on them. This makes them much more responsive and eliminates phantom carves!

Your trucks will still turn all the way even when you tighten your bushings down hard enough to make ordinary truck bushings pop out or "lock-up." Only the amount of force required to turn your truck changes.

Your Hardcore Bushings won't pop out of your truck castings or cup washers, because the Hardcore's rigid insert is bonded to its cushion, keeping the cushion from getting shoved out of place during turning or over tightening.

Your turns will be smooth and positive, not floppy or non-existent.

All these improvements stem from the fusion of our Hardcore insert with a high rebound cushion. Here is how it works for those who "have to know."

Single Action Bushings: When you turn a truck, the hanger web puts pressure on opposing sides of each cushion (one side of the inner bushing and the other side of the outer bushing). When one side of a non-HardCore bushing is compressed by the truck hanger web, the other side is pushed out, away from the king pin, often resulting in the bushing popping out of its proper location. I call this a "single action" cushion because only one side of the cushion works for you at a time, the part being squeezed between the truck hanger web and the cup washers.

HardCore Double Action Bushings: The rigid, Hardcore insert in the center of Bones Bushings is chemically bonded to the soft, outer, cushion part of the Bushing, and the king pin holds the Hardcore Bushing in place. When your truck hanger web pushes on Hardcore Bushings, it will compress the side being pressed on, but the other side of the bushing cannot be pushed away, as a single action bushing might, because the Hardcore's cushion is bonded to the rigid Hardcore insert. It also makes the far side of the cushion help to resist the pressure on the side being compressed. This is why Hardcore Bushings return to center so quickly, why they stay in place, why they allow you to tighten them without locking up the truck, and why we call them "double action" bushings. Only Double Action Hardcore Bushings work for you on both sides at once.

HardCores cost a few dollars more than ordinary cushions, but they are worth it because they increase the performance of your trucks, and make skating more fun. Hardcore Bushings are only a small part of your skateboard, but like your wheels and bearings, they do a lot of work when you skate and can make a huge difference in your overall skating experience. So for the price of a few stickers, treat yourself to a set of double action, Bones Hardcore Bushings and have more fun skating.

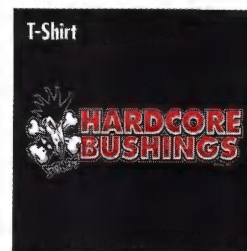

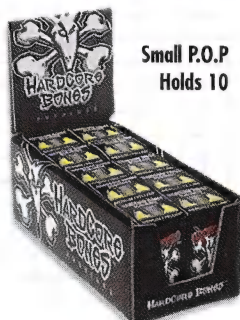

Hard, Hardcore Bushings provide high resistance to turning throughout the entire turning range and ultra quick response.

Medium, Hardcore Bushings are formulated for the majority of skaters who already have good control of their board and just want quick, positive response, centering and the control to skate anything or anywhere.

Soft Hardcore Bushings provide very easy turning, quick, smooth response and good centering. We recommend them for skaters who like their trucks loose, but not "floppy," longboarders, and little skaters for whom a soft Hardcore will feel like a medium or firm bushing.
